### Economical Laser Marking for shallow depth marking applications

Fitted with a 10 W laser, the compact and economical TF410 from **Technifor** guarantees an excellent marking quality and writing speed. The TF410 can execute most shallow depth marking applications for medium and large runs. Its 1.06µm laser light source housed in the separate control unit, its new-generation electronics and its small number of optical components, result in a marking head that occupies a volume of only 10 dm<sup>3</sup>. The separate control unit can be mounted in a 19" rack and incorporates a built-in buffer memory. The light beam is conducted to the marking head by an optical fiber.
