

HOSE KING 

SINCE 1983

FLEXIBLE HOSES & FITTINGS

Product Range

- ◆ H.P. Hydraulic & Steam Hose Assemblies.
- ◆ L.P. Outer Wire Braided Hoses & L.P. Fittings (Bulk)
- ◆ Cylinder & Burner Pig Tails For Commercial LPG Kitchen Equipments (L.P./H.P.)
- ◆ HP Brake Hose For Automotive Application (Hose Only)
- ◆ Teflon Hoses & Fittings
- ◆ SS Corrugated Hoses & Fittings
- ◆ Interlock Metal Hoses
- ◆ Ammonia Charging Line For Refrigeration Industry
- ◆ Air, Water, Steam, Rubber Hoses
- ◆ Furnace Hoses, Asbestos Covered
- ◆ Carbon Free Hoses
- ◆ Suction / Delivery Hoses
- ◆ All Related Fittings / Connectors / Adapters etc.
- ◆ Quick Release Couplings / Camlock Couplings

MARKING MACHINES, MICRO-PERCUSSION

Gravotech Engineering offers two more Technifor range of pneumatic micro-percussion marking machines, Models XF510Sp and XF510Dp, with marking fields of 100 x 80 mm and 200 x 80 mm. Claimed to be the fastest in the world in their category, they can mark up to 10 characters per second, twice as many as the previous generations. These are compact and feature multiple communication interfaces, which makes them even easier to integrate. These provide ideal solutions for precision marking applications in series production: mechanical engineering, motor vehicle manufacture, metalworking, pneumatic components, electronic components, sensors, etc. From the design stage on, the marking speed was the main priority set for the XF510Sp and XF510Dp models. Firstly,

latest-generation electronic components were selected to reduce calculation times. Secondly, the marking head shuttle trajectory was optimised. Lastly, a new motor control system was installed. New micromechanical components were also integrated. Models XF510Sp and XF510Dp marking machines can mark up to 10 characters per second, and they execute a DataMatrix™ code in under 5 seconds. Easy to use, their UC500 remote control unit is designed for use all over the world. Its interface currently features 20 languages; it handles 14 types of keyboard, and it is powered by a universally compatible system for supplies ranging from 90 to 250V. A production line designed in one country can thus be exported anywhere in the world without any modifications.

CRANES/HOISTS/GOODS LIFTS

Dhanvanthri Engineers is an ISO 9001-2000 certified organisation that strives to achieve excellence in the field of in-plant material handling and automation systems. Although the company predominantly manufactures various types of conveyor systems, it also designs full mechanical handling schemes, which ultimately incorporate various products to offer profitable, efficient and complete handling systems. As part of a diverse culture, the company is not limited to the mechanical environment, but also integrates the electrical control aspects of systems. It has full capabilities for design, supply and installation of all PLC control systems for all conveyors and associated product applications. It offers: 1. Monorail travellers – ground level and overhead; 2. Cranes – EOT/gantry/jib; 3. Hoists – electro-mechanical and skip type up to 30T; and 4. Goods lifts.
