## Technifor's XF530p - portable deep marking by micro-percussion

### The XF530p from Technifor offers deep marking by micro-percussion, attaining a depth of 0.4mm.

It can be used on tubes or smooth surfaces. It can be applied to the part, with no need for other pre-tension equipment or supplementary positioning.

The XF530p can be used to mark pipelines (oil, mining, gas), **lifting/hoisting equipment** (pallet trucks, forklift trucks), 'off-the-road' vehicles and naval constructions.

Weighing 18kg, for a volume of several dm<sup>3</sup>, the XF530p has a marking field of 200mm x 50mm and can scribe a variety of text, logos, dates, variables and Data Matrix codes.

The marking can be done on the flat, at angles or on radial curves, and with different types of font characters (continuous line, separated marks, or standard 5x7 fonts).

The XF530p is also designed to be ergonomic. Its marking release buttons are positioned on the control handle to facilitate good positioning during operation.

Its remote control unit, the UC500, comprises an interface in 19 languages, managing 14 types of keypad, and uses a universal power supply that operates between 90 and 250 volts.

The integrated monitoring software is also very user-friendly, ensuring fast creation of marking information. A large backlit screen allows quick sight of any marking in progress.

Finally, the XF530p is open to numerous interface connections (RS232, Ethernet and 8E/4S) to establish a link with information networks and/or in-house tracking systems. A simple USB key can import or export numbers, logos and historic documents.
